

# Valhalla Contact Form

## Custom Style

Some parts of the form can be customized by the addition of some CSS classes in the Custom Style tab. Note that you have to use the `!important` declaration for your changes to take effect.

### Background

The form background color can be changed with the class `vhcf-bg`. Example:

```
.vhcf-bg {  
    background-color: #ffffff !important;  
}
```

### Labels

Labels can be customized with the class `vhcf-label`. Example:

```
.vhcf-label {  
    color: #333333 !important;  
}
```

### Labels for Checkboxes and Radios

Checkbox and radio labels have a different font size, so they are customized with different classes.

If you're using labels in the usual position after checkboxes and radios, use:

```
.vhcf-check-label-after {  
    font-size: 14px !important;  
}
```

Otherwise use:

```
.vhcf-check-label-before {  
    font-size: 14px !important;  
}
```

### Submit Button

To change the background and font color for the submit button use the class `vhcf-submit-button`. Example:

```
.vhcf-submit-button {  
    color: #ffffff !important;  
}
```

## Form Width

To adjust the form width, use the class `vhc-form-width`. Example:

```
.vhcf-form-width {  
  width: 900px !important;  
}
```
