Valhalla Contact Form

Additional Settings

In the Additional Settings tab, you can add code snippets that activate some functionalities.

Subscribers-Only Mode

subscribers_only: true

Only logged-in users can submit your contact form.

Demo Mode

demo_mode: on

The demo mode lets you test your form without actually sending mail.

Acceptance as Validation

acceptance_as_validation: on

By default, an acceptance checkbox behaves differently from other types of fields; it does not display a validation error message even when the box is not checked. If you set acceptance_as_validation: on in the Additional Settings field, acceptance checkboxes in the contact form behave in the same way as other form fields.

JavaScript Code

on_sent_ok: ""

on_submit: ""

With on_sent_ok: followed by a one-line JavaScript code, you can tell the form to execute a piece of code when the form is successfully sent. Example:

on_sent_ok: "alert('message 1');"

With on_submit: a piece of JS code is executed even if the form failed to be sent to your email address. Example:

on_submit: "alert('message 1');"
